Safari Pathways™ Executive Summary

Safari Pathways is an SOP response management platform for corporate legal process teams. It is the first and only solution to help companies manage subpoenas in a single system, deliver responses electronically, automatically recover costs, and provide unmatched security–all with built-in auditing and reporting. **Implement Safari today to recover costs, reduce risk, and save time.**

One System
Managing All Responses

What does the flowchart of your current subpoena response process look like? Does it involve paper, sticky notes, scanning, emailing, printing, and/or multiple systems? Instead, imagine one system that captures all SOP, automated workflows, deadline alerts, seamless response delivery, issuer receipt confirmation, automated cost recovery, auditing of all actions, and built-in reporting. That system is Safari.

Specifically Designed
For Legal Process Teams

Safari is the only system uniquely built for SOP response teams:

— Documents are automatically downloaded from your SOP vendor, or can be manually entered if served directly on your company

— Users view documents side-by-side with key information and workflows enable routing for legal review or QA review

— Customizable checklists and templates enforce standardized processes and better satisfy compliance obligations

— Built-in auditing, reporting, and dashboards improve credibility internally and with regulatory agencies

Response Delivery
Automatically

One of the biggest challenges faced by companies responding to subpoenas is how to securely and efficiently deliver response files and collect response costs. Safari's SecureShare™ portal is the answer. We have created the first secure, seamlessly integrated, easy-to-use delivery system. The alternatives don't satisfy these needs. For example, to implement a third-party encrypted email

Safari Pathways™ Executive Summary

system, Outlook plug-ins are required, users have to manage encryption keys, the email system isn't integrated with the SOP system, and email systems have file-size limitations creating one-off workflows such as encrypting files on flash sticks for delivery. And there is no built-in cost recovery. It's time to upgrade from email or overnight paper mail to a modern 21st century solution for delivering SOP responses.

Superior Security
With Two-factor Authentication

Safari provides security *and* usability:

— **Single Sign-On (SSO):** If implemented, only users who are properly authenticated on your corporate network can access Safari. And, company users don't need new user IDs and passwords.

— **Encryption:** All data and file attachments are encrypted at rest in the Safari system, and during transmission.

— **Two-Factor Authentication:** For highly sensitive response files, add an extra level of security using Safari's unique two-factor authentication for verifying issuers.

— **Restricted Access:** For sensitive or confidential requests, restrict access only to specified users.

Cost Recovery
Guaranteed

On Safari, cost recovery for subpoena responses is as simple as checking a box to auto-generate an invoice. When the issuer accesses Safari's delivery portal, the issuer can see that the files are ready for download, but the issuer must first pay your invoice using a standard credit card interface. We call this the SecureShare paywall. It's simple, immediate, and the only cost-recovery solution in the industry. Safari will likely be your only system that enables you to recover the costs of legal operations AND pay for the system costs in year 1 – a great story for your company's CFO and CEO.

Experienced & Proven
Product Leadership

Safari has diverse and talented people with startup and large company experience. Our three founders helped build Serengeti Tracker, the world's most widely-used and highest-rated matter management and e-billing solution for corporate law departments. We are applying all that we learned to help law departments better manage subpoenas and other information requests.

"Safari is filling a big gap in the sparse technology for subpoena management—I've been waiting for this my entire career!"
